## Special Issue on “Cutaneous Lymphoma”

[Clinical Research in Dermatology: Open Access](#) (CRDOA) is an international Open Access Publication dealing with the skin, its diseases and their treatments. CRDOA provides a medium for projecting interesting and intriguing research in dermatology. The articles feature studies like dermato clinical investigations, cosmetology, skin infections & diseases, skin cancer, skin grafts, allergic reactions and immunological responses.

Cutaneous lymphomas are well defined member of non-Hodgkin’s lymphoma which involve in the cancer of lymphocytes (white blood cells) that pertain the skin. They can be described as lymphoproliferative skin infiltrates of B-cell, T-cell or natural killer cells which endure to the skin in most of the patients, without noticing extracutaneous manifestations at diagnosis. Classifications of cutaneous lymphoma are based on the type of lymphocyte: B-lymphocytes (B-cell) or T-lymphocytes (T-cell). Cutaneous T-cell lymphomas are commonly seen than the B-cell lymphomas.

Our Journal of Clinical Research in Dermatology invites papers from throughout the global community of researchers covering many topics but are not limited to: cutaneous follicle-center lymphoma, cutaneous fistulas, effects in cutaneous, equine cutaneous lymphoma, Treatment Response of Cutaneous which paves a way for publishing outcomes of recent research trends and investigations in Cutaneous Lymphoma.

As we are a step ahead to bring the *Current research on Cutaneous Lymphoma* exploration to you and every other in an easy accessible way by your participation and cooperation.
