Case Report

Thin endometrial lining is a difficult condition for IVF treatment. Thin endometrial lining can make it difficult for embryos to implant even when they are good quality embryos. Thin endometrial lining also can cause low pregnant rate and high miscarriage rate, which also cause miscarriages during earlier months of pregnancy. Many patients with this condition do not respond well to IVF drugs, even if Gynaecologists use different drugs and different protocols.

The reasons that cause thin endometrial lining are low estrogens (occurs in women in 40's, when estrogens receptors in the endometrial have decreased, affecting endometrial lining increase), inadequate blood flow, fibroids of uterus; poor health of endometrial tissue (recurrent miscarriages, the trauma of D&C or some surgeries), endometrial tuberculosis, affected by some drugs, long term use of birth control pills, gene disorder etc.,

TCM (traditional Chinese medicine) believes the reason causing thin endometrial lining are kidney deficiency (Kidney Qi, kidney Yin and kidney Jing), blood deficiency and blood stasis. TCM treatment principle is to tonify Kidney Qi, kidney Yin and kidney Jing, nourish blood, and activate blood circulation and anti-blood stasis. The advantages of TCM treatment are working in a holistic way to improve balance of body Yin and Yang, balance body Qi and blood so as to improve body's hormone level, improve ultras inner environments, endometrial receptivity and improve endometrial lining.

Case One

Mrs S.H, 40 years old, suffered from premature ovarian failure. She started anticipation drugs injection Depo-Provera from 17 years old. She stopped these drugs when she was 29 years old. Her menstruation stopped since. She started to see gynaecologist when she was about 36 years old as she want to start her family. She was going to start IVF; she had still no period even with some different drugs. She was given different drugs, for months and months, she was even put on Viagra to see if that would work. But her endometrial lining was not thickening (below 5mm). Gynaecologist suggested that she should have acupuncture preparation for her IVF, and suggested that she come to my clinic.

- A. Premenopausal symptoms: hot flushes; sweating in the night; insomnia; anxiety. (Tongue small, red colour and thin fur. Pauses: thin, weak, string.) Her macroscopic: fragmented endometrial biopsy showing some crush artefact. It shows glands of inactive pattern.
- B. Differentiation of symptoms by TCM: Deficiency in both Liver and Kidney Yin.
- C. Treatment principle: Reinforcing kidney and Liver, nourishing blood, improve blood circulation of ultras.
- D. Herbal medicine: Liu wei di huang wan, jiaweixiaoyao wan, ba zhen tang, fuke yang rong wan. (Above herbs use concentrated Chinese herbal powders, two times daily.)
- E. Acupuncture points: tai xi, san yin jiao, tai chong, he gu, zu san li, xue hai, gan shu, shen shu ,bai hui, guan yuan, zhong ji, zi gong.

Explanation and Result

Mrs H suffers from Premature ovarian failure, thin endometrial lining. Her differentiation of symptoms by TCM is deficiency in both Liver and Kidney yin. The treatment from the conception of the organism as a whole, I gave her Liu Wei Di Haung Wan, Jia Wei Xiao Yao pain work on tonic her Liver and Kidney yin in general. Ba Zhen Tang and Ren Shen Yang Rong Wan nourishing and activating her blood circulation working her whole body and also her ultras and ovaries. I use acupuncture working on her ultras and ovaries area, stimulation her local meridians and channel to improve her ultras' and ovaries' blood circulation, repairing and healing her Endometrial. After ten weeks acupuncture and Chinese herbs treatment, she felt more relaxed, her sleep is improved, her general energy is much better. Her IVF treatment started abroad. Her endometrial lining increased up to 6.5mm. She was transferred two embryos. She had a positive pregnancy test and had a scan when she was six and half weeks pregnant, her scan showed she was pregnant with twins. Then she started some bleeding. I prescribed some Chinese herbs prescription "An Tai Fang". Ingredient: Sang Ji Sheng 10g, Xu Duan 10 g, Tu Si Zi 20 g, Dang Shen 15g, Bai Zhu 10 g, Sheng Ma 6 g, Niv Zhen Zi 10 g, Han Lian Cao 10 g and Zhi Gan Cao 6g. After two to three days she took the herbs, her bleeding stopped. She had a scan later. The scan showed that there was one heartbeat. She lost one baby,

Figure 1:

and another one survived. She entered labour when she was 40 weeks pregnant. She has a healthy, good looking baby boy. Her gynaecologist in UK was surprised and pleased when he knew her situation Figure-1.

Case Two

Mrs., H.W 32 years old. She suffers from severe endometriosis for some years. She has severe dysmenorrhoea, her endometrial adhere her colon and her fallopian tubes. She had an operation to remove her left fallopian tube. She had failed two IVF, as her thin endometrial lining. Gynaecologist suggested that she should has some acupuncture to increase her endometrial lining and prepare her frozen embryo transfer next IVF.

- A. Patient symptoms: Dysmenorrhoea, Headaches before menstruation, PMS, Cold extremities, abdominal fullness and pain, loose stool, sensitive to wheat and dairy products.
- B. Differentiation of symptoms by TCM: Deficiency in both Kidney yang and Spleen Qi, Qi stagnation and blood stasis.
- C. Treatment principle: Strengthen Kidney yang and Spleen Qi, Nourishing Qi, activate blood circulation and anti-blood stasis.
- D. Herbal medicine: Jin Kui Shen Qi Pian; Shenling Baizhu Pian; Xiao Yao Pian; Tao Hong Si Wu Pian, Xue Fu Zhui Yu Tang (Above herbs use concentrated Chinese herbal powders, two times daily.)
- E. Acupuncture points: San Yin Jiao, Tai Chong, He Gu, Zu San Li, Xue Hai, Pi Shu, Shen Shu, Da Chang Shu, Bai Hui. Moxibustion, Qi Hai, Tian Shu, Guan Yuan, Zhong Ji, Zi Gong.

Explanation and Result

Mrs H's main problems is endometriosis. This condition cause her poor endometrial receptivity's and thin endometrial lining. She also suffers from bad IBS. I prescribed her Jin Kui Shen Qi Pian and Shen Ling Bai Zhu Pian working on her general Spleen Qi and her Kidney yang, improve her spleen and stomach function. Tao Hong Si Wu and Xue Fu Zhu Yu Tang nourishing blood circulation and anti- blood stasis on her ultras. I use acupuncture work on her whole body and her ultras, so as to improve her endometrial inner environments, improve her endometrial receptivity, and endometrial lining. I also suggested her massage and use Moxibustion on her abdomen and her legs acupuncture points every day. After two cycle menstruation acupuncture and Chinese herbs treatments, she started her IVF. Her ultrasounds scan showed her endometrial lining was about 8mm. She was transferred two frozen embryos, she had positive pregnancy test. She gave a labour of twins of healthy girls Figure-2.

Figure 2:

Case Three

Mrs S A is a 30 years old. She had two failed IVF. She had good quality embryos; the IVF did not work as her endometrial lining was thin.

- A. Patient symptoms: She started her menstruation when she was 16 years old. Her period was irregular. She suffered from dysmenorrhoea. She is thin, weak, and easy to catch cold, poor appetite. She had abdomen fullness, loose stool and the symptoms worse before her period. PMS, Anxiety, Insomnia, Sensitive to wheat and dairy products.

- B. Differentiation of symptoms by TCM: Kidney Qi and Jing deficiency; Spleen Qi and blood deficiency and blood stasis.
- C. Treatment principle: Nourishing Kidney Jing and Kidney Qi, Tonic Spleen Qi; Nourishing blood; Activity blood circulation and Anti blood stasis.
- D. Herbal medicine: Shen Ling Bai Zhu Pian, Jin Kui Shen Qi Pian. Ai Fu Nuan Gongi Wan, Tao Hong Si Wu Pian, Ren Shen Gui Pi Wan (Herbs use concentrated Chinese herbal powders, two times daily)
- E. Acupuncture points: Zu San Li, San Yin Jiao, Yin Ling Quan, Tai Chong, He Gu, Xue Hai, Pi Shu, Shen Shu , Da Chang Shu, Bai Hui. Moxibustion: Qi Hai, Tian Shu, Guan Yuan, Zhong Ji, Zi Gong.

period, small tongue, weak pulse shows her kidney Jing, Kidney Qi, Kidney Yang all deficient, Spleen Qi deficient. I prescript her Jin Kui Shen Qi Pian, Shenling Bai Zhu Pain, Aifu nuan gong Wan tonify her Kidney Qi and Yang, tonify her Spleen Qi and warm her Ultras, I gave her acupuncture, working on her general and local points. I also suggested that she should massage and use Moxibustion working on her abdomen at home as well. After a few menstrual cycles of acupuncture and herbal treatment, she started her IVF. Her ultrasounds scan shows her endometrial lining is 6.5mm and still keeps this level. I started increased acupuncture stimulation with electrical acupuncture machine, cupping, Moxibustion. Her endometrial lining was increased about 8mm when she had her frozen embryo transfer. She had a positive pregnancy test. When she was six weeks pregnant, she started morning sickness. I gave her acupuncture points: Gong Sun, Nei Guan, Zu San Li, and some Chinese herbs Xiang Sha Liu Jun Pian. Her morning sickness was improved. She is pregnant 30weeks now. Everything is fine.

Explanation and Result

Mrs. A has weak constitution, period start late, irregular

Analysis

- A. Infertility patients with a few IVF treatments are more likely to get stress and anxiety. Acupuncture treatment should release their stress and anxiety first, after their body relaxed; they would have better respond to treatments
- B. Patients with thin endometrial lining have different root cause and some of them can be complicated. The treatment normally take time. Acupuncture and some Chinese herbs together would work better.
- C. Most thin endometrial lining patients do not have good menstruation. Mostly they have light period, some patients suffer from amenorrhea. Treating this condition should work on regulate patient's menstruation and improve blood flow. The endometrial lining would be improved when their menstruation improved.
- D. Thin endometrial lining treatment can be complicated. Treating this condition should work with holistic way; see the conception of the organism as a whole. Treating a fundamental aspect of the problem, as well as those conditions. Acupuncture working for this condition needs to use general body points and also local points together
- E. Thin endometrial lining patients tend to have miscarriages easily during their pregnancy. We should treat them on time when they start to have some sign of miscarriage. We should give them acupuncture support during their pregnancy and prevent miscarriage. Prevention is better than cure.
