## Abstract

The article discusses and explains the phenomena of intuitive diagnosis, healing, and reviving the dead of Academic Grabovoi in Russia and the intuitive diagnosis of Vanga in Bulgaria. It is explained that this is done through the sophisticated Quantum Computer in our Subconscious, which operates with the waves of our weak nonlinear electromagnetic field (NEMF). Jesus' healing and reviving the dead was done in the same way. The article emphasizes that now when we started building Quantum Computers, it is extremely important to acknowledge the role our sophisticated Quantum Computer plays in intuitive creativity and intuitive diagnosis and healing. This would speed the development of the Quantum Computers and help us better see their future use in diagnosis and healing.

### Key words:

Quantum Computers; intuitive diagnosis; intuitive healing; Quantum Computers' use in Diagnosis; Quantum Computers' use in healing.

## The Phenomenon Grabovoi

Who is Grabovoi? He is Russian academician, who can diagnose with equal success people, airplanes, and all kind of technique, and has numerous patents. He can heal, revive the death, regrow organs, which were surgically removed 13 or more years ago, etc. He is a medical genius and not only medical. He was born with these extra-sensory abilities. At the same time, he is childishly naïve. In his book: "The Resurrection of People and Everlasting Life – Our Reality from Now on" published in Moscow in 2002 [1], he writes: "If I can do it, you can do it." It is very naïve to think that everybody can learn to be a genius like him and do everything he is doing after the suggested by him monthly meditation.

When I was reading his book, it became quite obvious that this genius man has troubles verbalizing his thoughts. I had to read his sentences three times to understand what he is trying to say, and frequently even after 3 readings I was not understanding. I also noticed that he cannot distinguish Spirit from Soul and is using the words improperly. (We are body and Spirits and the Soul is the unity of body and Spirit) [2]. Also, when speaking

about re-growing organs, he writes that we need to see the time as a function of the coordinates and it is the other way around. To describe growth (or any dynamic change) we need to see the coordinates as a function of time. I have done a lot of mathematical modeling of dynamic events and you can trust me.

So immediate questions aroused in my head: "How is it possible that this genius Russian academician does not know some basic facts and why he cannot verbalize his thoughts?" The verbalization is done by the Conscious. If Grabovoi cannot formulate his thoughts, there should be something wrong with his conscious brain. We can only speculate that maybe during the delivery his brain surface didn't get oxygen for a while and got damaged. As compensation, he is using the Quantum Computer of his subconscious brain, which is a Super-computer, and the birthplace of our intuitive creativity [3].

This would explain why Grabovoi is so intuitively creative, which makes him genius. At the same time, he is a handicap because he cannot verbalize his thoughts. And if he cannot distinguish Spirit from Soul, it is because he cannot ask questions. Questions are formulated in the conscious brain and obviously his conscious brain does not function well.

### More about Our Quantum Computer

Each one of us has Conscious, which is product of the functioning of our brain surface and works on biochemical basis as a digital computer. However, in the Subconscious in deep areas of the brain every one of us has a Quantum Computer, which works with the waves of our nonlinear electromagnetic field (NEMF), which we see as aura and we call it Spirit [4]. Since the Quantum Computer is in the Subconscious, we are not consciously aware of its existence.

We became aware of the existence of this Super Computer in the Subconscious from hypnosis, which put the Conscious to sleep to access the Subconscious. Hypnotists discovered with surprise that their patients with sleeping conscious could

calculate 10,000 times faster. Why do we need this Super-Computer at Subconscious level? Obviously, for security reasons we were ingeniously created with two types of memorizing and two types of vision.

As said in our article [4], we see not only with our eyes and we memorize not only with our conscious brain. Dr. Pribram showed that even at quite severe damage of the brain surface, the past memories remain intact [5], [6], [7]. This is because a full record of everything we have seen, heard, and smelled during our lifetime is also stored in deep areas of the brain, where our Subconscious is (for protection).

We know that the Subconscious contains a full record of our lifetime from hypnosis, which puts the Conscious to sleep and allows contact with the Subconscious [8]. Our sleep is non-stop alternative switches between light sleep, when the conscious is active (and dreams take place) and deep sleep when the subconscious is active. It seems that during these switches the visual, hearing, and etc. information recorded during the day in the conscious (on the surface of the brain) is scanned and sent for long-term storage in the deeper areas of the brain called the Subconscious.

The famous mathematician von Neumann estimated that the human memory for a lifetime is about 2.8.1020 bits of information [8]. What kind of memory should our Subconscious has to be able to handle such large amount of information? Holographic memory (memory with coherent waves) allows the most compact record. Therefore, the full lifetime record at subconscious level [9] must be holographic.

Our organs are holographically represented on the surface of the body: on our palms, feet, ears, and the irises of our eyes. The acupuncturists know that they can heal with equal success by treating the acupuncture points of the sick organ on any of these representations. Thus, we have holographic representations of the organs on the surface of the body to tell us that our organs are ruled and regulated on holographic principle. Since the functioning of all our organs is ruled by the Subconscious (we don't have conscious awareness for it), this is a proof that our subconscious must operate on holographic principle.

Why are all our organs subordinated to the Subconscious? Why we don't have conscious awareness of their function? It is deliberately done because in crucial moments of our life, when our life is threatened and we need to react fast to survive, we don't want to be bothered with information about the functioning of our internal organs. Thus, the functioning of our internal organs is subordinated to the Subconscious and since holographic images are created with laser-type of waves, the organs' functioning must be ruled and regulated through waves - the waves our NEMF called Spirit.

Thus, while our material conscious brain memorizes on biochemical principle like a digital computer, our subconscious brain memorizes on the holographic principle with laser-type of waves. If so, the waves of our nonlinear electromagnetic field (NEMF) [4] must be the one handling our lifetime holographic memory at subconscious level. If our Super-Computer in the Subconscious operates with laser-type of waves, it must be a Quantum Computer. It seems that this Quantum Super Computer is the biggest gift, which the Creator God gave us, because it works with the waves of our NEMF, which we see as aura (Light) and we call it Spirit.

However, being Supreme Intelligence, the Creator gave access to the powerful Super Computer only to highly spiritual people, who meet some moral criteria. (It makes sense.) We know this from the research of Dr. Valerie Hunt [10], who found that while the majority of people have NEMF with major frequency 200 Hz, clairvoyants' NEMF (who have access to the Quantum Computer, which allows them to make quantum jumps and foresee the future or see the past) have frequencies between 400 Hz and 800 Hz. (We must underline that both the frequencies and the intensity of the NEMF are important.)

The higher the major frequency of NEMF, the more spiritual the person is, and the better he sees with his Mind (the future, the past, etc. [4], [10]). This is an additional proof that the Mind is an attribute to the human NEMF. Dr. Keith Floyd, psychologist at Virginia Interment College said: "If reality is nothing but a holographic illusion, the physical brain does not produce the mind. Rather, it is the mind that creates the appearance of the brain, as well as the body..." [8]. Indeed, the nonlinear electromagnetic field (NEMF) creates the whole body, including the brain, and our superb Mind comes with it and operates on holographic principle.

By all means, it seems that the weak NEMF, which I spent 40 years of my life measuring, and which rules and regulates the functioning of our organs, is not the field produced by their functioning [12]. However, only when the NEMF of the father joins the NEMF of the mother's unfertilized cell, the embryo development of heart, lungs, brain, etc. can start. Thus, the NEMF is the one that creates the organs, and later rules, regulates, and synchronizes their function. It also rules (controls) the growing of our skin, nails, and hair and everything else in the body.

Through its waves, this NEMF records (memorizes) everything we see, hear, smell, or emotionally experience as holograms and store this information in the Subconscious. Since nonlinear electromagnetic field means also field that does not dissipate and field that can pass through walls or screens, at the end of life when the person dies, this non-dissipating NEMF leaves the body [9], but it carries the entire memory of the whole lifetime as a three-dimensional holographic record.

### **Holographic Seeing with the Mind**

Can we really see with our Mind? According to Hindu and Yoga texts, we can also see with our Mind, not only with our eyes [11]. Russian scientists investigated V. Bronnikov, who could see with his mind [4]. When he sees with his eyes, the equipment registers impulse from his eyes to his brain. When he is blindfolded and the equipment does not register impulse from his eyes to his brain, he could still see.

He could even see the object when it is behind a dense screen [8], which proves that nonlinear waves are involved because only nonlinear waves can pass through a screen. He could even see the object from different angles [8], which indicates that the vision is three-dimensional or holographic. Obviously, seeing with the mind involves nonlinear laser-type of waves and since our NEMF is rich of such waves, it must be involved in it.

I have spoken with many people who have been in a state of clinical death and came back. They all describe seeing their lifeless body lying on the bed, while hovering over it for three days. This means that during clinical death, when we say that the Spirit leaves, our NEMF leaves the body. Russian scientists did measure the NEMF and they found that it takes three days and three nights for this field to separate from the EMF of the nervous system of the body and leave [11]. However, if our NEMF could see the physical body, this means that our NEMF has holographic vision (called seeing with the Mind), which is done through its coherent waves.

### **Seeing with the Mind for Diagnosis**

Thus, the higher is the major frequency of the NEMF of a person, the higher are his abilities to see with his Mind. This is extremely important if the person is a medical doctor because the holographic seeing of his NEMF would allow him to see inside the body of the patient. He will not only see what is wrong with the patient, he would see what caused it, and he would see how to fix it [2].

I met at a conference in Bermuda Dr. Vitulkas from Greece, who was seeing with his mind. He was coming to the US to teach courses in a Naturopathic School and his students told me that his diagnoses were right more than 95% of the cases. The doctor told me how shocked one of his patients in Greece was when he told her before she opened her mouth that she is having heart troubles because of the problems she is having with her husband. Doctors usually don't say things like this, which explained her surprise, but she confirmed she was having troubles with her husband.

Shafica Karagula, neuropsychiatrist in Los Angeles, got interested in the 1960s of doctors doing nontraditional diagnostic with intuitive vision. After a few trials to contact such gifted doctor, finally she signed in as a patient. When in his office, she asked what he sees being wrong with her. He scanned her

with his eyes and said she would need a surgery. She knew this because she already diagnosed herself and was just looking for confirmation [11]. He was right in every detail.

### **Where Does the Pribram Hypothesis for Holographic Brain Stay?**

If our subconscious brain works with waves on holographic principle, where does the Pribram's hypothesis that the conscious brain must work on the holographic principle stays? Dr. Pribram first noticed that patients with surgically removed parts of their brain didn't suffer loss of memory and he started researching where the memory is located. Being neurosurgeon, Karl Pribram first started experimenting with cats. He found that even when he removed most of the cats' brain surface, the cats could still find their ways around. This meant that their memories and ability to move remained intact, even when most of the brain surface was not there [5].

Pribram in collaboration with Karl Leshli also did experiments with rats [6]. Even when so much of the rat's brain surface was removed that they barely walked, their memories remained intact – they could still find the shortest way in the labyrinth. Based on this, Pribram concluded that the memory is not local, but distributed in the whole brain. He always believed that the brain surface, and only the brain surface (the conscious) recorded our memories.

Pribram's opponent, Pitsh, did experiments with salamanders [7]. He would cut the brain into pieces, mixed them, removed some, and the salamander would still remember. He gave up and accepted the holographic idea of Pribram. However, Pitsh experiments de facto indicated that the brain surface (the conscious) was not the one responsible for the memory because even when the brain was so severely mistreated, the memory was still there. But this was the holographic memory recorded at subconscious level with the coherent waves of our NEMF.

Also, people, who have been in a state of clinical death, when coming back still remembered their relatives and friends, regardless that their brains were not functioning for three days. The fact that their memories were not erased throws a shade over the widely accepted Pribram's hypothesis that our brain surface (the conscious) creates the holographic memories, while de facto the Quantum computer in the Subconscious operating with the waves of our NEMF create and store the holographic memories.

### **The Phenomenon Vanga**

Could our NEMF (Spirit) really see? In Bulgaria, there was a woman, Vanga, who was physically blind, but she could see with her Mind [2]. She would walk along the pathway in the garden and she would suddenly stop and pointing to a particular plant say to her niece: "You think that this is just a flower, but it is also an herb good for this and this disease." She was clairvoyant seeing with

her Mind inside the people's body, seeing their health problems, as well as their past and future. She was phenomenal and she was for years investigated by the Bulgarian Medical Academy.

I knew a person, who for a long time had constant diarrhea, lost a lot of weight, and was on his way to die, when he decided to go and see Vanga. Vanga told him right away that he has problem with the pancreas. However, leaving when he was at the door he decided to ask a question. Vanga said: "Do you ask your radio questions? Don't ask questions now, the connection is interrupted." When his pancreas was investigated and the doctors prescribed him the enzymes, which his pancreas was not producing, his diarrhea stopped, he started to gain weight, and he recovered completely.

### **The Phenomenon Jesus**

Up to now, we discussed the phenomenon Vanga and the phenomenon Grabovoi. In both cases, their abnormal sensitivity and ability to intuitively diagnose (Vanga) or intuitively diagnose and cure diseases (Grabovoi) were in the case of Vanga a compensating mechanism for a lost vision or in the case of Grabovoi a compensating mechanism for lost ability to use properly the conscious brain. However, you don't need to be handicap to be able to intuitively diagnose and cure diseases, which is done through access to the Quantum Computer in the Subconscious.

As we have shown in section 2, not everybody can have access to the Quantum Computer and use it to diagnose and cure intuitively. Contrary to what Grabovoi said that everybody can do it after a month of recommended by him meditation [1], the research (measurements) done by Valerie Hunt [10] shows that only people with high major frequency of their NEMF (highly spiritual people) are clairvoyants, i.e. can foresee the future and see the past, which is done through the Quantum Computer. These highly spiritual people are also the ones who can do intuitive diagnosis and healing.

Such highly spiritual person, who could intuitively diagnose and cure, as well as revive the dead, was Jesus. He was not handicap like Grabovoi or Vanga, but he could do it because his spiritual level was the highest possible on Earth. The more spiritual is a person, the higher is the major frequency of his NEMF, and the easier it is for him to access and use the Quantum Computer in the Subconscious, which works with the waves of our NEMF called Spirit. That is why it is worth working hard to grow spiritually because this empowers you; it allows you access to the Quantum Computer, which can intuitively diagnose, heal, and even revive the dead [13], [14], [15].

## **Conclusion**

Thus, we can see with our eyes and the information is recorded in our conscious mind, which is our digital computer. But we can also see with our Mind, and this is done through the Quantum Computer, which operate at Subconscious level with the waves of our NEMF, seen as aura (Light) and called Spirit. Since it operates with waves, it is 10,000 times faster (known from study of hypnosis). The Quantum Computer also has tremendous storage capacity because the memorizing with waves on holographic principle is very compact.

We are already on the way to create Quantum Computers and if so we should be ready to acknowledge the fact that in our Subconscious there is a Quantum Computer operating with holographic images created with the waves of our NEMF. If when creating Quantum Computers, we would have as a prototype the sophisticated Quantum Computer in our Subconscious, we would make much faster progress. The Quantum Computers, which we will create, will be capable to see what is inside the body and diagnose with precision as the doctors who see with their Mind do.
